QAD Partner Eagle Consulting Announces Automated Data Collection (ADC) App for Android Devices

*"Android devices can now use
RF Express™ for QAD Enterprise Applications
side by side with traditional RF bar code scanners and terminals."*

Kinnelon, NJ (Private Distribution) December 13, 2011 — Eagle has been a strategic partner of enterprise software giant QAD since 1992. Today, 800+ customers around the world have chosen Eagle's product, RF Express™ for QAD Enterprise Applications, to meet their automated data collection and bar coding needs.

Eagle is pleased to announce that **RF Express for QAD: Android OS** is now available for download to an Android device. This enables the device to perform the same transactions as other authorized ADC devices. **RF Express for QAD: Android OS** can do so both on the local network and on a 3G/4G mobile network on capable devices.

Additional benefits to the use of an Android Device:

1. **RF Express for QAD: Android OS** can operate in an on-premise or on-demand environment, providing standard, real-time data validation and transaction update with QAD.
2. In an on-demand environment, **RF Express for QAD: Android OS** can continue to operate even if local power and/or connectivity is lost. The Android device can leverage the 3G/4G mobile network until connectivity is once again available.
3. Authorized users can connect remotely by means of the 3G or 4G mobile network.
4. **RF Express for QAD: Android OS** maintains barcode scanning capability with available Socket Mobile SocketScan 7Xi family of Bluetooth scanners.

Eagle anticipates that this option will get wide usage throughout our user community, along with our previously released iRF Express for QAD, which is available for download onto the iPhone®, iPad® and iPod Touch®.

##

About Eagle

Eagle Consulting & Development is the leading provider of portable wireless technology solutions for users of QAD Enterprise Applications worldwide. Eagle's product, RF Express™ for QAD Enterprise Applications, provides functionality for fault-proof, real-time automated data collection and bar coding at the single site or multinational level enabling manufacturers to achieve their data accuracy, inventory accuracy, labor cost and efficiency goals.
